

Elections to Council Nucleus and Nominating committee 2024-2026

Motivation letter: Why are you interested in joining the Council Nucleus or Nominating committee (250 words max)?

During my cardiology specialty training I was struck by insufficient attention given to cardiovascular complications in cancer patients. A single case of a young woman developing fatal heart failure after chemotherapy set me on my mission to improve the care for these patients. In the following years I have set up a dedicated outpatient health care program to optimize cardiovascular health prior to anti-cancer treatment, screen for acute cardiotoxicity, treat cardiovascular toxicities, and provide long term screening in cancer survivors. Ever since, I have helped other centers successfully setting up similar programs, actively participated in regional and national cardio-oncology education, organizing several cardio-oncology symposia, and trained students, residents and cardiologist in cardio-oncology care at our institution. I have connected multiple disciplines to form a cardio-oncology research group at our institution and I participate in several international collaborations.

As the director of our cardio-oncology unit, we have been awarded the gold status of a cardio-oncology center of excellence by the IC-OS. I currently have the opportunity to participate in several national and international cardio-oncology guidelines, have set up an international cardio-oncology registry (G-COR) in collaboration with the Cleveland Clinics, and our multi-center cardio-oncology intervention trial testing cardioprotective therapy during anthracycline administration will start enrolling the upcoming year in the Netherlands.

I would like to further share my knowledge and experience, as well as my passion for education and improving our healthcare system across the border. To be part of the ESC council would offer a fantastic opportunity to realize these goals.

Arco Teske

Cardio-oncology
Non invasive imaging

Missions

Advancing novel developments in medical imaging in the clinical field in order to improve our diagnostic capacities and working toward a more personalized approach of early disease detection and monitoring.

~

Improving the cardio-oncological care across the spectrum of preventing, diagnosing and treating cardiovascular toxicities.

~

Sharing knowledge, training and teaching our future colleagues, connecting different disciplines, generating clinically oriented research in order to continuously improve patient care.

Relevant Work Experience

2016-2019: Fellowship non-invasive imaging department of Cardiology, University Medical Center Utrecht

2015-current: Director of Cardio-oncology unit

2016-current: Head of the echo-department

2019-current: Cardiologist Academic hospital

Publications

>100 publications (*h*-index 30) in high impact journals on:

- Cardio-oncology,
- Early diagnosis of myocardial disease using advanced non-invasive imaging,
- Artificial intelligence.

Education

1999-2005 Doctor of Medicine at the University of Utrecht

2009 PhD University Medical Center Utrecht, department of Cardiology

2008 Masters Degree Advanced Medical Imaging at the Catholic University Leuven

2009-2016 Specialty training Cardiology University Medical Center Utrecht

2016-2018 Fellowship non-invasive imaging

Key achievements

Starting the first dedicated Cardio-oncology health-care program in the Netherlands;

Contributing to national and international Cardio-oncology position papers and guidelines;

Our team being recognized and an IC-OS Center of Cardio-oncology Excellence gold status based on patients care, education, program building, collaborations, and research.

Education

Focus points

1. Non-invasive imaging

I am the head of the echo-departments since obtaining my cardiology degree in 2016. I am responsible for the planning in the echo-lab, protocol development, the education of the technicians, residents (AIOS), research fellows and clinical fellows I have an active role in the collaboration with the department of radiology and nuclear medicine with the interpretation and reporting of cardiac MRI, CT and SPECT/PET.

2. Cardio-oncology

Since 2015 I have set up, in collaboration with the department of haematology and oncology, a specialized outpatient clinic to screen and treat patients receiving (or having received in the past) cardiotoxic chemotherapy. This specialized outpatient clinic has been the first in the Netherlands. I currently see over 10 unique cardio-oncology patients per week. The protocol I have designed is currently being implemented in 12 other institutions. We have launched the multi-center registry ONCOR in 2019, already including over 1000 unique patients. I am currently employed by the Princess Maxima Center in Utrecht managing cardiovascular complications in the adults after childhood cancer (LATER initiative). Our experiences has recently led to the cardio-oncology symposium I organized at the UMCU in 2018 and a virtual cardio-oncology symposium in 2021. I am the first in the country to obtain the ICOS cardio-oncology certification after passing the board examination in 2021 and also supervising the first cardio-oncology fellowship in the Netherlands. The UMCU has been awarded the gold status by ICOS as a clinical Center of Excellence, currently one of the 15 centers worldwide to achieve such a status

3. Valvular heart disease & Echo-guided interventions

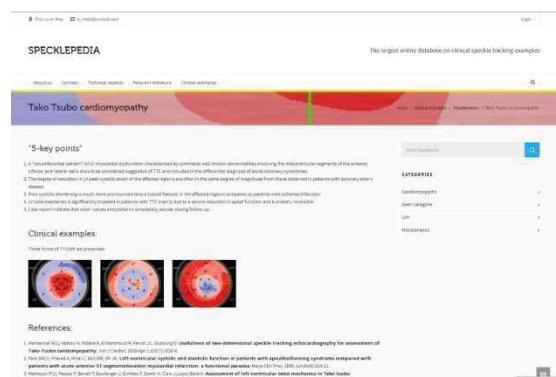

I have an active role in the weekly heart valve team and in the endocarditis team where the patients with difficult valvular heart disease are discussed from the region. I perform second opinion consultations at my outpatient clinic for these cases and perform additional imaging (TOE and/or stress imaging) in specific cases.

I am part of the MitraClip and TAVI team as the main imaging cardiologist. I have assisted in over 100 MitraClip cases, over 100 TAVI patients and a variety of other procedures (PVL, balloon valvuloplasty). I am the only cardiologist ever to have successfully performed a TTE guided MitraClip placement. I am also responsible for the assessment of valvular intervention on the operating theatre

4. Advanced echocardiography & imaging cardiomyopathy

My focus, in addition to heart valve and 3D imaging, is deformation echocardiography. My mission is further improve this technique in the (pre)clinical field and to unravel specific disease entities by studying the myocardial mechanical behaviour by this technique.

The end-goals is to implement this technique in the clinical field to aid in the clinical decision making (improving diagnosis, predicting prognosis, evaluating therapeutic interventions). I have designed an open access website dedicated to clinical speckle tracking echocardiography. The aim is to provide clear examples on typical findings by 2D strain analysis by providing illustrative examples: <http://www.SPECKELPEDIA.com>

- Book chapters

- 1) Cardiac MRI in diagnosis, clinical management and prognosis of arrhythmogenic right ventricular dysplasia/cardiomyopathy

Chapter 12. Echocardiography applications in diagnosis and management of patients with ARVC.

- 2) Practical Echocardiography

Chapter 7 Strain echocardiography
